

**Corning/Creston Interconnect – Transmission Line between Water Sources of Corning Municipal Utilities and Creston City Water Works**

With this interconnect in place, if we have a problem with one system, we can flow water from an alternate source. This will help keep our customers in water service in cases of leaks. Total cost of this project is estimated at \$2,654,500. No new customers will be added with this project. This project is not scheduled to be bid until sometime in 2013.
